DETAILED ACTION

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claim 6 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. Applicant is redefining the intermediate layer. Currently claim 6 depends from claim 5, which defines the composition of the intermediate layer.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-3 and 5 are rejected under 35 U.S.C. 103(a) as being unpatentable over Watanabe et al (2001/0016522). Regarding claim 1, Watanabe discloses a golf ball comprising a core, an intermediate layer, and cover layer. The Shore D hardness of the cover layer is larger than the hardness of the intermediate layer (abstract). The ration of the deflection of the intermediate ball and the core is from 0.9 to 0.970 (abstract). The thickness of the intermediate layer from 0.2 to 2 mm and the cover layer thickness is from 1.6 to 2.3 mm (para. 29, 35). Since the properties as listed above fall

within applicant's range the initial velocity will also fall within applicant's range. Regarding claim 2, the cover layer thickness is from 1.6 to 2.3 mm and a Shore D hardness from 60 to 68 (para. 35, 36). The thickness of the intermediate layer from 0.2 to 2 mm and the Shore D hardness is from 45 to 55 (para. 27, 29). Since the properties as listed above fall within applicant's range the initial velocity will also fall within applicant's range. Regarding claim 3, the melt flow rate is obvious over Watanabe since the cover materials are identical. The present invention and Watanabe disclose Himilan 1706 and 1605 for cover materials. Regarding claim 5, since applicant claims ingredients B and a-1 or a-2 in zero amounts Watanabe satisfies the limitation by disclosing olefin-based elastomers for the intermediate layer (para. 24). One of ordinary skill in the art would vary the dimensions and properties for enhanced performance.

Allowable Subject Matter

Claim 4 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
